Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Presley in view of Nukushina , Sakai et al, Mimura et al and Shimizu .

Presley discloses motor apparatus with motor comprising having rotor and stator , driving circuit, controller , wires mounted on stator of motor scattered peripherally and energized to rotate rotor of motor , spiral wires classified in two groups, see fig 2, col 4 lines 5-25, fig 5 and col 5 lines 30-45. Presley lacks disclosing first and second driving circuit, ac motor, sensor and steering wheel. Nukushina discloses first and second driving circuit see fig 4 and col 5 lines 25-35, and col 8 lines 25-35. Sakai et al discloses ac motor , see paragraph (0004) lines 1-5. Mimura et al discloses sensor , see fig 1A. Shimizu discloses steering wheel and steered wheel, see col 1 lines 40-55. It would have been obvious to one of ordinary skill in the art to combine apparatus of Presley with first and second driving circuit of Nukushina , ac motor of Sakai et al , sensor of Mimura et al and steering wheel of Shimizu for compact driving means and economizing power consumption, and since modification of motor does not depart from scope and for improved control .

3. Claims 7-8 allowed.
